

## CM M3 Manual steps

~Qualified by entities.

See Separate Document

User defined data type

The Data type was updated.

The internal and external mapping functions were scoped to the UDF

The Fld triples were adjusted

Mapping Funtion parameters were adjusted

Action diagram was adjusted

All fields that inherit from a user defined field had their scoped mapping function added to the "web" package

An instance where substring uses the 2E style -for end length for end has a value of -1 in 2E, which causes a run time exception
